# SOFTWARE FULL STACK DEVELOPER

Detailed Job Description

| | |
|---|---|
| **Position** | Full Stack Developer |
| **Experience** | 0–2 Years |
| **Employment Type** | Full-time |
| **Location** | Mumbai / Hybrid |

## About the Role

We are looking for a motivated and technically strong **Full Stack Developer** to design, develop, test, deploy, and maintain scalable web applications. The ideal candidate should be comfortable working across both frontend and backend technologies, building RESTful APIs, integrating databases, and collaborating with developers, designers, and business stakeholders to deliver reliable software solutions.

## Key Responsibilities

- Develop responsive, accessible, and user-friendly web applications using modern frontend technologies.
- Build reusable, maintainable, and scalable UI components using React.js.
- Develop backend services and RESTful APIs using Node.js and Express.js.
- Design, implement, and maintain database solutions for application data and business workflows.
- Integrate frontend applications with backend APIs, databases, and third-party services.
- Implement authentication, authorization, validation, and secure application workflows.
- Write clean, modular, reusable, and maintainable code following established software engineering practices.
- Debug, test, troubleshoot, and resolve functional and performance-related application issues.
- Optimize applications for performance, scalability, reliability, and maintainability.
- Participate in code reviews and contribute to improving development standards and engineering practices.
- Collaborate with developers, designers, product teams, clients, and other stakeholders to understand requirements and deliver features.
- Use Git and GitHub for source control, branching, collaboration, and code review workflows.
- Contribute to application deployment, configuration, monitoring, and maintenance across development and production environments.

## Required Technical Skills

- Strong knowledge of JavaScript and modern web development concepts.
- Hands-on experience with React.js and component-based frontend development.
- Practical experience with Node.js and Express.js.
- Experience designing and consuming RESTful APIs.
- Experience working with MongoDB or another NoSQL database.
- Understanding of SQL and relational database concepts.
- Working knowledge of HTML5 and CSS3.
- Familiarity with Git and GitHub.

- Understanding of frontend–backend integration and API-based application architecture.
- Good understanding of data structures, algorithms, and software engineering fundamentals.
- Strong debugging, analytical, and problem-solving skills.

## Preferred / Nice-to-Have Skills

- Experience with PostgreSQL or another production-grade relational database.
- Knowledge of Python and familiarity with Python-based backend or automation workflows.
- Experience with TypeScript.
- Familiarity with cloud platforms such as AWS, Azure, or Google Cloud.
- Experience with Docker and containerized application development.
- Knowledge of JWT, OAuth, session management, and application security.
- Experience with automated unit, integration, or end-to-end testing.
- Familiarity with CI/CD pipelines and automated deployment workflows.
- Experience building real-time or event-driven applications.
- Understanding of scalable backend architecture, caching, queues, and performance optimization.
- Exposure to Generative AI, machine learning, or AI-powered application development.

## Frontend Responsibilities

- Create responsive interfaces that work consistently across desktop, tablet, and mobile devices.
- Develop reusable React components and maintain a clear component architecture.
- Manage application state and asynchronous API interactions effectively.
- Integrate frontend applications with REST APIs and handle loading, error, and empty states.
- Apply accessibility, usability, and performance best practices.

## Backend Responsibilities

- Design and implement RESTful backend services using Node.js and Express.js.
- Create well-structured API endpoints with appropriate validation and error handling.
- Implement business logic and application workflows on the server.
- Design database schemas and queries suitable for application requirements.
- Apply authentication, authorization, input validation, and secure API practices.
- Monitor and optimize API performance and reliability.

## Database Requirements

- **MongoDB:** Understanding of document-oriented data modeling, CRUD operations, indexing, and application integration.
- **SQL:** Understanding of relational data modeling, joins, constraints, queries, and transactions.
- **PostgreSQL:** Preferred experience with schema design, queries, indexing, and production application integration.

## Education

Bachelor's degree or currently pursuing a degree in **Computer Engineering, Computer Science, Information Technology**, or a related field. Equivalent practical development experience may also be considered.

## Candidate Profile

- Strong understanding of both frontend and backend development.
- Practical experience building complete full-stack applications.
- Ability to translate functional requirements into technical implementations.
- Comfortable working with APIs, databases, authentication, and application workflows.
- Strong debugging and problem-solving capabilities.
- Ability to learn new technologies and adapt to changing technical requirements.
- Good communication and collaboration skills.
- Ability to work independently while contributing effectively to a development team.

## Core Requirements for Candidate Screening

| Category | Primary Requirements |
|---|---|
| Frontend | JavaScript, React.js, HTML5, CSS3 |
| Backend | Node.js, Express.js, REST APIs |
| Database | MongoDB, SQL / relational database concepts |
| Development | Git, GitHub, debugging, testing, software engineering fundamentals |
| Architecture | Frontend–backend integration, API architecture, scalable application design |
| Preferred | PostgreSQL, Python, TypeScript, Docker, cloud, CI/CD, authentication |

**Screening Note:** Candidates should be evaluated based on demonstrated evidence of skills and relevant experience rather than keyword presence alone. Related technologies should not automatically be treated as exact matches.
