Job Description — Software Developer / AI & Full Stack Developer

Position

Software Developer — Full Stack & AI/ML

Experience

0–2 Years

Location

Mumbai / Hybrid

About the Role

We are looking for a Software Developer with a strong foundation in Java, Python, JavaScript, web development, databases, and AI/ML concepts. The candidate should be comfortable developing backend services, building web applications, working with databases, and implementing machine learning and rule-based solutions.

The role involves developing practical software solutions using technologies such as React, Node.js, Express, Django, Flask, FastAPI, PostgreSQL, MongoDB, SQLite, and Supabase.

Key Responsibilities

- **Develop web applications using React, Node.js, Express, Django, and Flask.**
- **Build backend services and REST APIs using Node.js, Express, Django, Flask, and FastAPI.**
- **Design and manage databases using PostgreSQL, MongoDB, SQLite, and Supabase PostgreSQL.**
- **Develop Python-based backend and AI/ML functionality.**
- **Implement classification, regression, and rule-based systems for application requirements.**
- **Integrate machine learning models into backend applications.**
- **Develop image-based AI functionality using trained YOLO models.**
- **Implement algorithms for data processing, prioritization, scheduling, and application workflows.**
- **Work with Pandas for data processing and manipulation.**

- **Develop applications involving user login, permissions, and JWT authentication.**
- **Build real-time application functionality and notification workflows.**
- **Develop rule-based systems for generating user-specific summaries and recommendations.**
- **Work with Scikit-Learn models and manage trained models using Joblib.**
- **Develop automated routines and backend scripts using Python.**
- **Use Git and GitHub for version control and software development.**
- **Apply strong problem-solving, DSA, and OOP fundamentals when developing software solutions.**

Required Technical Skills

Programming Languages

- **Java**
- **Python**
- **JavaScript**
- **HTML/CSS**
- **SQL**

Web Development

- **React**
- **Node.js**
- **Express**
- **Django**
- **Flask**
- **FastAPI**

AI / Machine Learning

- **Classification**
- **Regression**
- **Rule-Based Systems**

- **Scikit-Learn**
- **YOLO**
- **Joblib**
- **Fuzzy Logic**

Databases

- **PostgreSQL**
- **MongoDB**
- **SQLite**
- **Supabase / Supabase PostgreSQL**

Development Tools

- **Git**
- **GitHub**
- **Pandas**
- **JWT**

Technical Responsibilities

Backend Development

- **Develop backend applications using Node.js, Express, Django, Flask, and FastAPI.**
- **Create and integrate REST APIs.**
- **Implement backend business logic and application workflows.**
- **Develop database-backed services using PostgreSQL, MongoDB, SQLite, and Supabase.**
- **Implement authentication and role-based permissions using JWT.**

AI/ML Development

- **Implement classification and regression models.**
- **Develop rule-based systems for application-specific decision making.**
- **Integrate trained YOLO models into backend APIs.**
- **Use Scikit-Learn for machine learning model development.**

- **Save and load trained models using Joblib.**
- **Implement fuzzy-logic-based processing for user data.**
- **Connect machine learning scripts with web applications.**

Web Application Development

- **Build responsive web applications using React and JavaScript.**
- **Develop backend functionality using Node.js, Express, Django, Flask, and FastAPI.**
- **Integrate frontend applications with REST APIs.**
- **Implement real-time notifications and application workflows.**

Database Development

- **Design and maintain PostgreSQL databases.**
- **Work with MongoDB and SQLite for application data.**
- **Use Supabase PostgreSQL for backend data storage.**
- **Create and manage database tables and application records.**
- **Store user activities, food logs, schedules, and other application data.**

Candidate Profile

The ideal candidate should demonstrate:

- **Strong Java programming fundamentals with knowledge of DSA and OOP.**
- **Good Python programming ability.**
- **Knowledge of JavaScript and HTML/CSS.**
- **Experience developing full-stack web applications.**
- **Understanding of backend development and REST APIs.**
- **Knowledge of relational and NoSQL databases.**
- **Understanding of machine learning concepts including classification and regression.**
- **Ability to integrate AI/ML models into software applications.**
- **Strong algorithmic and problem-solving abilities.**
- **Familiarity with Git and GitHub.**

- **Ability to develop practical software projects combining web development, backend systems, databases, and AI/ML.**

Education

Bachelor's degree or currently pursuing a degree in Computer Engineering or a related field.
