Job Description — Cloud & Machine Learning Engineer

Position

Cloud & Machine Learning Engineer

Experience

0–2 Years

Location

Mumbai / Hybrid

About the Role

We are looking for a Cloud & Machine Learning Engineer to develop machine learning solutions and integrate them into scalable software and cloud-based applications. The ideal candidate should have a strong foundation in Python, machine learning, data processing, backend development, databases, and cloud technologies.

The role involves building, deploying, and maintaining ML-powered applications while working with cloud infrastructure, APIs, databases, and machine learning models.

Key Responsibilities

- **Develop and implement machine learning models for real-world applications.**
- **Perform data preprocessing, analysis, and feature preparation for ML workflows.**
- **Build and evaluate classification and regression models.**
- **Develop Python-based machine learning pipelines and backend services.**
- **Integrate trained ML models into production applications and APIs.**
- **Develop REST APIs for serving machine learning functionality.**
- **Work with structured data and relational databases.**
- **Design and manage cloud-based application and ML deployment workflows.**
- **Deploy and maintain ML applications in cloud environments.**
- **Monitor application and model performance and troubleshoot issues.**
- **Develop backend services using Python-based frameworks.**

- **Implement rule-based logic alongside machine learning models where required.**
- **Work with databases for storing application and model-related data.**
- **Use Git and GitHub for version control and collaborative development.**
- **Collaborate with software developers and other team members to integrate ML solutions into applications.**

Required Skills

Programming

- **Python**
- **SQL**
- **Java**
- **JavaScript**

Machine Learning

- **Machine Learning fundamentals**
- **Classification**
- **Regression**
- **Model evaluation**
- **Data preprocessing**
- **Feature engineering**
- **Scikit-Learn**
- **Pandas**
- **NumPy**

Backend & APIs

- **FastAPI**
- **Flask**
- **Django**
- **REST APIs**

Cloud & Deployment

- **Cloud application deployment**

- **Cloud-based ML deployment**
- **Application monitoring**
- **ML model deployment**

Databases

- **PostgreSQL**
- **MongoDB**
- **SQLite**
- **Supabase**

Development Tools

- **Git**
- **GitHub**
- **Joblib**

Preferred Skills

- **Experience integrating trained machine learning models into backend applications.**
- **Experience working with image-based machine learning models.**
- **Familiarity with YOLO-based models.**
- **Experience building rule-based or fuzzy-logic systems.**
- **Experience developing automated ML-powered applications.**
- **Understanding of backend and database integration for ML applications.**

Responsibilities Across the ML Lifecycle

Data Processing

- **Prepare and process datasets for machine learning workflows.**
- **Work with structured data using Python and Pandas.**
- **Store and retrieve application and ML-related data using relational and NoSQL databases.**

Model Development

- **Develop classification and regression models.**
- **Train, evaluate, and improve machine learning models.**

- **Save and load trained models using Joblib.**
- **Integrate trained models into application workflows.**

ML Application Development

- **Build APIs that expose machine learning functionality.**
- **Integrate ML models with backend services.**
- **Develop application logic combining machine learning and rule-based approaches.**

Cloud Deployment

- **Deploy ML-enabled backend applications to cloud environments.**
- **Maintain reliable application and model-serving workflows.**
- **Monitor deployed services and troubleshoot issues.**

Education

Bachelor's degree or currently pursuing a degree in Computer Engineering, Computer Science, Artificial Intelligence, Machine Learning, Data Science, or a related field.

Candidate Profile

The ideal candidate should have:

- **Strong Python programming skills.**
- **Good understanding of machine learning concepts.**
- **Practical experience developing ML models.**
- **Understanding of classification and regression.**
- **Experience working with databases and backend APIs.**
- **Interest in deploying machine learning solutions to cloud environments.**
- **Strong problem-solving and algorithmic thinking.**
- **Familiarity with Git and collaborative software development.**
