MAYURESH VENGURLEKAR

FULL STACK DEVELOPER

Mumbai, India • +91 8108735755 • mayuresh.vengurlekar19@gmail.com • mayureshvengurlekar.com •

GitHub: github.com/mayureshvengurlekar

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience designing and developing scalable, responsive, and production-ready web applications across frontend and backend technologies. Proficient in JavaScript, TypeScript, React.js, Node.js, Express.js, Python, MongoDB, PostgreSQL, Azure, and GCP, with experience building RESTful APIs, secure authentication systems, database-driven applications, and real-time services. Experienced with Docker, AWS, GitHub, GitHub Actions, CI/CD pipelines, automated testing, JWT, OAuth, and scalable backend architecture. Additional experience in Generative AI and Machine Learning, with strong software engineering, debugging, and problem-solving fundamentals.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, SQL

Backend Development: Node.js, Express.js, JavaScript, TypeScript, RESTful APIs, JWT, OAuth 2.0, Real-Time Systems

Cloud & DevOps: AWS, Azure, GCP, Docker, GitHub, GitHub Actions, CI/CD Pipelines, Application Deployment

Frontend Development: React.js, JavaScript, TypeScript, HTML5, CSS3, Responsive Design, State Management

Databases: MongoDB, PostgreSQL, SQL, Database Design, Indexing & Query Optimization

Testing, Tools & AI: Git, GitHub, Postman, VS Code, Unit/Integration Testing, Generative AI, Embeddings, Vector DBs (Qdrant)

PROFESSIONAL EXPERIENCE

Tech Lead — Ekdrishti Group Pvt. Ltd.

Apr 2026 – Present

- Lead end-to-end development and delivery of scalable full-stack web applications using JavaScript, TypeScript, React.js, Node.js, and Express.js.
- Design robust backend architectures, RESTful APIs, authentication systems (JWT, OAuth 2.0), and database solutions for secure application workflows.
- Optimize database solutions using MongoDB and PostgreSQL, focusing on schema design, indexing, and query performance.
- Build real-time application features using event-driven backend services and WebSocket-based communication.
- Containerize applications using Docker and manage cloud deployments across AWS, Azure, and GCP infrastructure using GitHub and GitHub Actions CI/CD.
- Establish automated testing (unit, integration, API) and best practices while conducting code reviews and mentoring team members.

Full Stack Developer Intern — DreamVentz Private Limited

Jan 2026 – Mar 2026

- Developed responsive full-stack applications using JavaScript, TypeScript, React.js, Node.js, Express.js, and MongoDB.
- Built reusable frontend components using React.js, TypeScript, and JavaScript for scalable application development.
- Designed and implemented RESTful APIs in Node.js/Express.js integrated with MongoDB and PostgreSQL databases.
- Implemented JWT-based authentication, role-based access control, API validation, and security protocols.
- Containerized development services with Docker and configured automated testing and deployment CI/CD pipelines via GitHub Actions.

EDUCATION

Bachelor of Technology — Computer Engineering

2023 – 2027

Vidyalankar Institute of Technology, Mumbai | CGPA: **9.9 / 10**

KEY PROJECTS

Healthcare Appointment Management System with Facility Directory

- Developed a scalable full-stack healthcare platform using JavaScript, TypeScript, React.js, Node.js, Express.js, MongoDB, and PostgreSQL.
- Engineered doctor profile management, dynamic appointment scheduling, and real-time availability tracking.
- Implemented secure RESTful APIs with JWT authentication and role-based authorization for patient and admin portals.
- Built a searchable healthcare facility directory with advanced filtering and optimized MongoDB and PostgreSQL queries.
- Integrated automated email notifications, patient feedback/rating systems, and containerized deployment with Docker, AWS, and Azure.
- Managed project repository on GitHub with comprehensive automated API testing and a GitHub Actions CI/CD pipeline.

AI-Powered Resume Screening Platform

- Architected an AI recruitment platform that analyzes Job Descriptions and resumes to rank candidates by technical and semantic relevance.
- Implemented BGE-M3 embeddings and integrated Qdrant vector database for semantic JD-to-resume similarity search.
- Engineered a hybrid scoring system balancing semantic similarity, required/preferred skills, experience, projects, and education.
- Built an explainability layer detailing matched skills, missing requirements, score breakdown, and resume evidence.
- Developed backend RESTful APIs with Node.js, Express.js, JavaScript, and TypeScript, utilizing MongoDB and PostgreSQL for candidate data management.
- Secured platform with JWT and role-based access control, containerized via Docker, hosted on AWS/GCP, and maintained via GitHub CI/CD.

CORE COMPETENCIES

JavaScript | TypeScript | MongoDB | PostgreSQL | GitHub & GitHub Actions | Azure | GCP | AWS & Docker | React.js & Node.js | Express.js & REST APIs | SQL & Database Optimization | JWT & OAuth 2.0 | CI/CD Automation | Automated Testing | Generative AI & Vector Search
